## FAST 74F139

## Decoder/Demultiplexer

## Dual 1-of-4 Decoder//Demultiplexer

## FEATURES

- Demultiplexing capability
- Two independent 1-of-4 decoders
- Multifunction capability

## DESCRIPTION

The 74F139 is a high speed, dual 1-of-4 decoder/demultiplexer. This device has two independent decoders, each accepting two binary weighted inputs ( $A_{0n}, A_{1n}$ ) and providing four mutually exclusive active-Low outputs ( $\bar{Q}_{0n} - \bar{Q}_{3n}$ ). Each decoder has an active-Low Enable ( $\bar{E}$ ). When  $\bar{E}$  is High, every output is forced High. The Enable can be used as the Data input for a 1-of-4 demultiplexer application.

## NOTES:

- For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
- All typical values are at  $V_{CC} = 5\text{V}$ ,  $T_A = 25^\circ\text{C}$ .
- Not more than one output should be shorted at a time. For testing  $I_{OS}$ , the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter test,  $I_{OS}$  tests should be performed last.

## TAPE AND REEL PACKAGING

### SPECIFICATIONS

Tape and Reel specifications conform to Electronic Industries Association (EIA) Proposed Specification #EIA-481-A using 13 inch reels. Current incremental quantities reflect the quantities per reel. As more customers are able to handle a larger quantity per reel, this quantity will be increased.

### DEVICE AVAILABILITY

Products available in tape and reel packaging are identified in the Price Book with a "T" suffix to the basic part number and are only offered as a product for sale by the reel. Return of product is limited to full reels with unbroken quality seals.
